encapto wifi

ENCAPTO FOR TRANSPORT

Connected on the move

MORE THAN JUST INTERNET ACCESS

On the move in vehicles and transport hubs, Encapto delivers timely and engaging content, keeps travellers connected, supplies actionable insights and extracts more value from WiFi networks.

Delivering targeted messages to a captive mobile audience with real connectivity needs, Encapto's smart features make it the first choice in transport WiFi management.
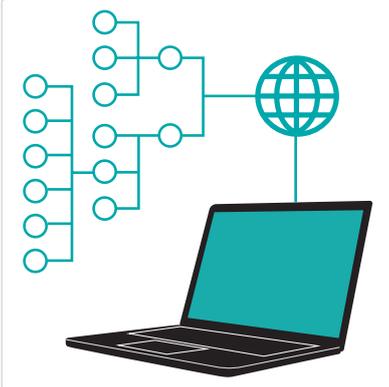

Smart travel updates

Encapto campaign provides you with the tools to deliver the right message at the right time to the right WiFi user. Build elegant portals with rich content and live data and deliver time critical messages while users are connected.
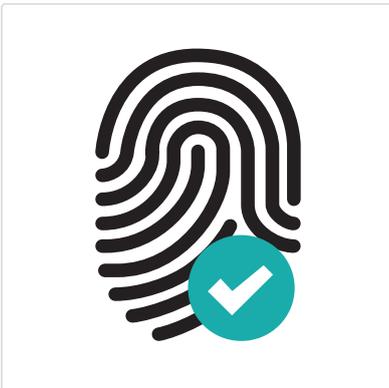

Deploy data capture to gather demographic insights, build client databases and even transform your campaign into a fully fledged competition, then analyse the results to see just how effective your WiFi campaign can be.

One network, many uses

Encapto can direct different user groups to the content and connectivity that they need. Apply multiple access methods with their own walled garden, time, download and speed restrictions on a single hotspot.
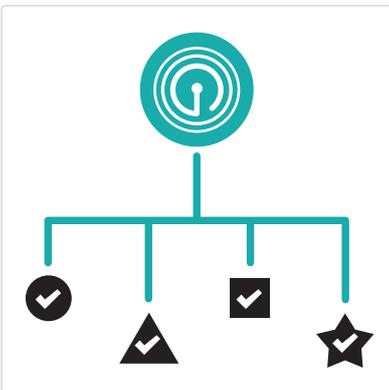

With one stop management and monitoring from Cloud Deck control panel and easy integration with loyalty programs and booking systems, Encapto is the WiFi system befitting today's sophisticated travel environment.

Multiple Authentication Methods

Generate unique or shared passwords, enable credit card access or use one of the Encapto connectors to authenticate via loyalty programs or booking systems. Get your clients and staff online seamlessly with:

- Click and go
- Unique or shared passwords
- Paid access
- SMS and email authentication
- Social media logon
- Data capture (survey or registration)
- Encrypted access

Vendor agnostic

The Encapto system can be applied to any WiFi network, existing or planned.

Put Encapto's trademark flexibility, robustness and elegance at your fingertips in a single portal managing WiFi networks from multiple vendors. Encapto also integrates with a range of vendor specific services such as location analytics, to extract maximum value from WiFi networks.

So regardless of whether you're using Xirrus or Ruckus, Cisco or Aruba, or a combination of them all, Encapto puts the power in your hands.

Onboard engagement

Local rich media content makes the most of high speed WiFi without clogging up valuable internet bandwidth.

Plug in a live video stream, allow access to ticketing, food, beverage and merchandise ordering systems and video content all from onboard servers.
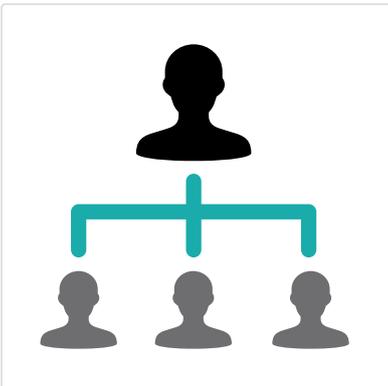

Localised content leverages the high-speed capabilities of 802.IIac wireless, providing an immersive experience for connected users and eliminating reliance on costly and speed-constrained internet connections.

Carrier class user management

Built on carrier class standards AAA RADIUS, Encapto reliably serves over one million WiFi sessions a month to wireless networks of all sizes – cafés, stadiums, public transport, and large municipal networks.

Built on Amazon's AWS cloud, Encapto offers a 99.99% uptime guarantee.

Nested user permissions

With so much functionality packed into a single platform, Encapto's granular user permissions put the right functionality in the right hands.

The marketing manager needs to update an ad in an Encapto Campaign while the IT manager needs to deploy a new SSID for hospitality staff. Encapto caters for them all with a fully customizable interface.
